

CONFIGURATION

BEFORE YOU BEGIN

A key step before you start measuring is knowing whether your curtains will be face fix or ceiling fix.

You will also need to decide whether you want your curtains to finish above the floor, on the floor, or if you would like them puddling - finishing above the floor is generally not used for ceiling fix curtains.

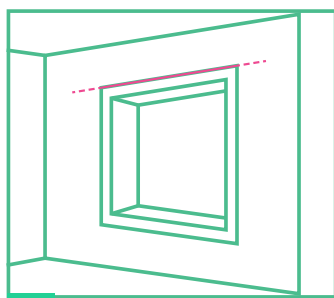

-10mm from on-floor measurement

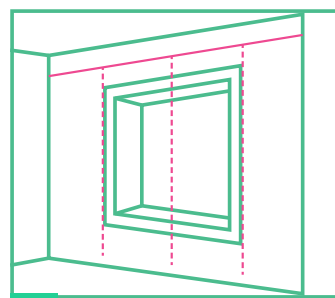

+50-100mm to on-floor measurement

MEASURE - FACE FIT

TICK IF FACE FIT

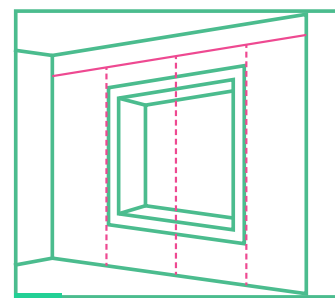

A

On floor

B

Puddling
+50-100mm to on-floor measurement

A. MEASURING THE WIDTH

Measure the exact outside width of architrave, then add 30% so the curtain stack clears the window.

NOTE: IF MEASURING WALL TO WALL PLEASE DEDUCT 50MM

B. MEASURING THE DROP

Measure from where you would like the top of the track to be to the floor.

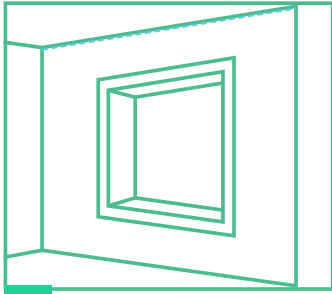

Measure along the left, middle and right. Be sure to select which type of finish and measure to specified length.

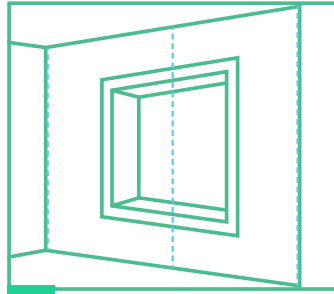

MEASURE - CEILING FIT

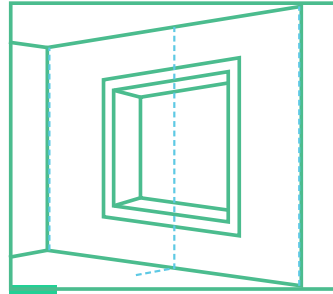

TICK IF CEILING FIT

A

B On floor

B Puddling
+50-100mm to on floor measurement

A. MEASURING THE WIDTH

Measure the width of the wall.

If you have a cornice - measure from the inside of the cornice.

If you do not have a cornice - measure from wall to wall.

NOTE: IF MEASURING WALL TO WALL PLEASE DEDUCT 50MM

B. MEASURING THE DROP

Measure from the ceiling to the floor.

Measure along the left, middle and right. Be sure to select which type of finish and measure to specified length.
